- Minimum viable product will be created, including login page with OAuth, customer/server menu, and manager inventory

Task Assignments:

Task Description	Assigned to
Implement designs for customer and server menu pages into website	Jeremy

Ensure first edition of minimum viable product is functional for release	Joshua
--	--------

Minutes (Notes) from Previous Meeting

First meeting consisted of all team members getting together and establishing Team Alpha's workplace for our Spin N' Stonasite. The group repository, project3_alpha, was made on Github and each team member and TA listed as collaborators. Jira was determined to be our project's Agile management software and React for our front-end design language. Future plans were set out to design our front-end using React and to consider how our customer and server menu pages will appear and how queries would be accepted.
